

CredAble Speciality Chemicals Procurement Solution

Extend DPO without adding balance sheet debt

Structured procurement financing for **supplier payments**, across **domestic** and import purchases

Speciality chemicals businesses often face a working capital mismatch given long **sales realization cycles** and **cross-border** transit times. Inventory at sea is **unproductive** and eats into precious working capital.

Cross-border procurement, **multiple currencies**, **varying incoterms**, different **transit timelines** and **supplier** participation can add further complexity.

CredAble structures **procurement-led** working capital solutions that enable **on-time supplier** payments and **extended buyer credit**.

What the structure enables

Extended payable days

Buyers can purchase goods on extended credit while maintaining procurement continuity.

On-time supplier payments

Suppliers are paid on time, including overseas vendors.

Off-balance sheet financing support

The structure is designed to reduce dependence on on-balance sheet facilities.

Cross-border procurement support

Supports procurement across multiple jurisdictions, currencies, incoterms and transit timelines.

Operational control for the buyer

The buyer retains control over key operational aspects such as quality checks, inspections and related processes.

Why this matters for Speciality Chemicals businesses

DPO extension

Extend buyer payment periods without delaying supplier payments.

Reduced upfront cash outflows

Lower working capital pressure across import and procurement cycles.

Improved liquidity

Unlock capital tied up between supplier payments and longer receivable cycles.

Scalable procurement structure

Support procurement flows across products, suppliers and geographies.

Why CredAble?

\$21B+

working capital enabled

175+

corporates supported globally

100+

financial institutions onboarded

350K+

SMEs served globally
